

# CORPORATE AND PRIVATE INVESTIGATIONS

## Occurrence and Serious Crime Investigation Database

Designed By Investigators  
For Investigators

"I like the searching capability, notes and assigning tasks. The link analysis charts are looking really good!"

JJ Gee, Nagrastar, LLC

### Comprehensive, Cost-effective, Easy to Use

- Intelligence led integrated records management system eliminates the need for multiple 'one off' software packages to conduct even the most challenging investigations.
- Workflow and task assignment displays support effective and efficient investigation and personnel management.
- Intuitive case management interface harnesses the expertise of both 'paper based' and computer savvy investigators:
  - Secure virtual filing cabinet, organized logically with easy access to content, enables quick response to enquiries or investigative leads
  - Adding data such as investigators notes, exhibits, new documents, tasks, time entries, or expenses is simple and straight forward
  - Easy for investigators to link important elements of an investigation directly to the information source. Links can be viewed, expanded, printed and disclosed as needed
  - Tablet compliant so all case information is readily accessible to the entire investigative team whether on the road or in the office

Corporate and Private Investigations

## Efficient and Effective Workflow Management

Assists the management team to quickly understand the overview of case and task assignments. Visual displays are easily and instantly available for review, giving management a quick snapshot of the entire work load.

## Intuitive Case Management Interface

Case files are listed logically, just like opening a filing cabinet, but with all the benefit of a full text index and sorting capabilities. Opening a case file is like opening a manila file folder that stores all the investigative content, except that the content is logically organized and easily accessible. All data entered from within a case file is automatically linked to the case. Investigators have the option of expanding the intelligence gathered during an investigation by easily linking existing elements or creating and linking new elements.

For a Demo of how OSCID can heighten the power and performance of your investigative team contact [Steve.Rogers@dei.ca](mailto:Steve.Rogers@dei.ca) or call 1.519.317.2017

## OSCID System Highlights

- Intuitive and easy to navigate, regardless of technological expertise
- Secure Web-based system for “24/7, go anywhere” access
- Logically organized work flow
- Integrated property/exhibit management including movement history and photos
- Tablet compliant for mobility and in-car use
- Integrated visual link analysis
- Document templates
- Time and expense tracking
- Access to the International Shared Element Portal (iSEP)
- Manages simple and complex investigations
- Easily attach any electronic file
- Document attachments are fully searchable
- Comprehensive tasking capabilities
- Extensive list of linked elements
- Manage confidential sources of information
- Link elements in real time
- Search across all investigations
- Log counterfeit property seizures
- Record Customs port information
- Flexible tagging for comprehensive statistics
- Case synopsis
- Preparation of disclosure for counsel
